

AN EASY WAY TO CHECK IF FONTS ARE EMBEDDED

Once you have created your PDF open it in Adobe Acrobat Professional or Reader. Go to File – Document Properties and the Fonts tab. If you see the words (Embedded) and (Embedded Subset) next to the list of font names then you know that the fonts are embedded.

If you do not see the words (Embedded) and (Embedded Subset) next to the list of font names then you know that the fonts are not embedded.
